Dear Sir;

I have been very interested in the initial draft of the developement of the Deer Creek Recreation area.

May I suggest, that the Utah State Road Commission be invited to the hearing on 12 April 1984 so that they may understand the traffic conjection that is produced expecially at the Island Boat Camp during peak summer time activities. Maybe they can be of great help in that area.

Sincerely Yours;

R. Raymond Green, M.D.

Re: Comments on Draft - Deer Creek General Management Plan

We appreciate the opportunity to comment on the Draft copy of the Deer Creek General Management Plan. The Wasatch City-County Health Department has been concerned for a number of years with the potential health problems that are associated with Deer Creek Reservoir. We feel that the action being taken by the State Park and Recreation will not only help meet their legal responsibility to provide developments where "health and enjoyment of life of the people may be further encouraged" but will also help the health department insure that minimum health standards are being met.

We feel that a properly developed recreational facility will be a benefit to both the State Parks and Recreation and to Wasatch County in general.

The main items the health department would like to have addressed are:

Who will be responsible for the development and operation of the waste water disposal systems and the culinary water supply for the proposed developments.

We would insist that as the plans are developed for the facilities that the health department be informed and proposed plans, specification and other pertinent information be provided to insure that health concerns are met.

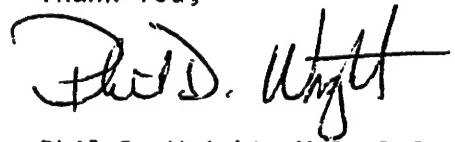

We would think that the problem of sanitation facilities in the winter months when ice fishing is allowed needs to be addressed.

We would like to have a projected time table for the proposed phases of development so the health department can determine what action we should pursue.

-2-

Again we appreciate the opportunity to comment and hope that we can continue in a cooperation effort to provide good quality recreational development in our county.

Thank You,

A handwritten signature in dark ink, appearing to read "Phil D. Wright". The signature is fluid and cursive, with the first name "Phil" and last name "Wright" clearly distinguishable.

Phil D. Wright, M.S., R.S.
Health Officer

Caldwell-Luc approach to the maxillary sinus with later exenteration of the ethmoidal sinus air cells, as described by Ogura, is the most effective means of performing orbital decompression. Although traditionally this approach has been the realm of the oto-laryngologist, ophthalmic plastic and reconstructive surgeons in some centers are being trained in this approach. Since ophthalmologists are the ones who see most of the patients with dysthyroid ophthalmopathy, it is an advantage when the ophthalmologist can also perform the definitive surgery, especially in the critical time when vision is threatened.
